...

I compared the control and variant groups for each metric using a two-sample Welch's t-test.

Metric	Control Mean	Variant Mean	Difference (Variant – Control)	p-value	Significant?
metric_1	-0.130	0.077	+0.207	0.333	No
metric_2	0.051	-0.187	-0.239	0.287	No
metric_3	0.155	-0.005	-0.160	0.348	No
metric_4	-0.139	-0.085	+0.054	0.789	No
metric_5	0.107	0.095	-0.011	0.951	No

Using a standard significance threshold of 0.05, none of the five metrics differ significantly between the control and variant groups.
